

Custom Software Development

Your Business is Unique.
Your Software Should Be Too.

Custom Software Development.

Custom application development is a sign that things are moving in the right direction, that you're growing, and that you're just too big for off-the-shelf solutions.

It's a big step in the life, health, and growth of your business; but custom applications need to solve a business purpose and be used as intended. To achieve that, we follow a process that ensures alignment around a shared vision before initiating agile development.

WHAT TO EXPECT

 **We start by defining the problem** with a Design Thinking workshop. We gather your team's insights and sort, prioritize, and define the problem and identify what your user really needs.

 **We move into finding the right solution** by partnering with you to develop the product strategy and solution design. We test and iterate, starting with wireframes before beginning agile development.

 **We build and deploy the solution** following an Agile development methodology. Our goal is to deliver value as quickly as possible through a regular deployment cadence, focused on highest priority features and functionality.

What you'll get.

Our tech-agnostic, cross-functional team will design and implement results-driven custom solutions to support your unique business needs. Our expertise ranges from secure and scalable SaaS products to legacy modernization for Fortune 500 companies and more.

Our custom software development often includes the following components:

TECHNOLOGY STRATEGY

Before we can turn your vision into a product, we'll lay out a roadmap for success. Your product strategy will define not only what and how to build, but who to build it for and why. We'll help you think through an exact definition of your customer, how they'd use the product, and how to make them successful repeat users.

CUSTOM DEVELOPMENT

Optimize your time, money and resources, regardless of where you are in your product lifecycle or what device or platform you use. We can help you validate and execute your idea – without the expense of building something unproven. We'll design and test a prototype to help utilize your budget more effectively.

DEVOPS

Accelerate your development cycle by minimizing costs and driving efficiency with our DevOps and QA Automation experts. We'll help you get to market 4x faster and will work with your team to unify your software development, IT operations, and customer feedback.

Software solutions.

Here are some of the solutions and capabilities that we've delivered to our clients:

- Digital strategy Consulting
- Mobile App development
- Cloud deployment
- CI/CD pipeline automation
- Legacy system upgrades
- Customer experience design
- Platform redesign
- Workflow and process automation

Other services.

PRODUCT STRATEGY AND DESIGN

We help our clients gain a deeper understanding of the people they serve while aligning tactics and technologies to serve them better. We leverage Design Thinking to stand in the shoes of your customers and create delightful experiences that inspire and engage.

DATA ANALYSIS & ENGINEERING

When you are ready to translate complex data into powerful insights - we'll get you there. Whether it's data engineering or BI reporting, we have the expertise to ensure you stay ahead of the competition.

SALESFORCE CONSULTING

Whether you're launching for the first time or need to re-implement to maximize your investments - we'll ensure you fully leverage out-of-the box Salesforce capabilities while implementing the customization needed for your unique business requirements.
